

Executive Summary

The Instructor Performance and Course Quality Evaluation project was conducted to assess teaching effectiveness and course quality across the EduPro online learning platform.

The analysis integrated instructor, course, and transaction datasets to evaluate relationships between teaching experience, expertise, instructor ratings, and course ratings.

Key findings revealed that highly rated instructors are generally associated with better course ratings and stronger learner satisfaction. Teaching experience was found to positively influence instructor performance, while certain expertise areas consistently delivered higher-quality learning outcomes.

The study also identified variations in course quality across categories, highlighting opportunities for targeted improvement initiatives. Performance dashboards were developed using Streamlit to provide real-time insights into instructor effectiveness and course quality metrics.

Recommendations include instructor development programs, continuous performance monitoring, mentorship initiatives, and category-specific quality enhancement strategies.

Overall, this project provides EduPro with a scalable and objective framework for evaluating teaching quality, improving learner experiences, and strengthening platform credibility.
